ADC 403, Revised Procedures for Processing Depot Returns - SCC H and Automatic Disposal

- Changes made to preclude uncontrolled release of sensitive, hazardous, or NWRM materiel to DLA Disposition (DRMO)
- At time of receipt if SCC is H and management code is J, M, or T and :
 - DEMIL Code is: F, G, or P
 - CIIC is: A-H, K, L, O, Q, R, S, T, 5, 6, 8 or 9
 - Cargo Code: is
A,B,C,D,F,G,I,J,K,L,M,N,O,P,R,S,T,V,W,X,Y or 1
- Condition code will flip to K and an SDR will be produced and materiel will be stowed
- A result of the T2T DSS review brought on by the Taiwan incident
- Potential systems change for DSS to retain SCC H with SDR and stow materiel

ADC 403, Revised Procedures for Processing Depot Returns - Materiel Identification Not Known to Receiving Depot

- DSS assigns locations by NIIN/SCC and where applicable other materiel characteristics such as HCC, CIIC, shelf-life... etc
- To comply to 24 hour receipt posting, for materiel over current \$100.00 disposal threshold assign a pseudo NSN
 - Assign FSC that closely resembles materiel
 - Enter as NIIN a description of the item
- Use of “Unknown” default NSN would eliminate what little control and visibility is provided by the pseudo NSN
- A local document number is used when/if needed

ADC 403, Revised Procedures for Processing Depot Returns - Materiel Identification Not Known to Receiving Depot

- The increase in \$\$ threshold will:
 - Decrease DLA Distribution operating costs for the handling, storage, and management of this materiel
 - Reduce posting errors to an incorrect owner
 - Reduce DLA Supply Chains costs for the management of Supply Discrepancy Reports
- An actual ICP cannot always be identified for this materiel
- Shipper is most often known and can be tied to a service
- Additional efficiencies could be attained if each service established an "Unauthorized Return" RIC
